

CSS

In this assignment, you will take the HTML fundamentals page, and style it using CSS. Try to avoid making changes to the HTML itself.

Required Features:

- All text on the page should use a sans-serif font family.
- The page should be 1024 pixels wide, and be centered on the page, with equal margins to the left and right.
- Give the page the appearance of the example placed in picture below, using only your own CSS code.
- (The gray boxes show where elements should be positioned – you do not need them to appear as gray boxes on the page)

Code Requirements:

- All the CSS code should come from the same file and be linked into the HTML file through a link tag – there should be no style tags or style attributes in the HTML file at all.

Optional:

- The second paragraph of the first article element should be written in bold text, with a blue text color.
- In the unordered list in the side content, items should appear in alternating colors (green and red, as a suggestion).

Resources:
